README

Doxygen Documentation Sonar Cloud

1.1 README

Current workflows:

- build
 - build and test the application on:
 - * windows with cl
 - * ubunut with g++
 - * ubuntu with clang++
- CodeQl
 - Code security
- · Doxygen Action
 - Generate Doxygen documentation
 - Deploys generated documentation to gh-pages
- Microsoft C++ Code Analysis
- · pages-build-deployment
- · SonarCloud
 - Static code analysis For Scanning Alerts -> Security

Regarding coding style (?):

- no classes in global namespace
- no "using NAMESPACE"
- · 4 space indenting
- ? setup astyle options?

Git (?):

- · no direct commits onto main (only via pull-requests)
- •

Libraries

- jsoncpp
- Easyloggingpp
- · Catch2

Libraries can be found in ./lib. They are subprojects and will be compiled when building the project for the first time. Alternately compiled versions can be found at ./lib/compiled. As is, this approach works on linux (gcc, clang) and Windows (Mingw). As steps found in the tutorial (checking for compiler in cmake) are not necessary.

README

Todo List

Global main (int argc, char *argv[])

Github

- "Dev-Ops"
- · Doxygen settings
- Template-Comment
- Template-Header-Comment

Global WIP::exampleEasyLogging ()

Configure easylogging properly

- · outsource easylogging config
 - e.g. startup class?

Todo List

Namespace Index

3.1 Namespace List

Here is a lis	st of all namespaces with brief descriptions:	
WIP		
	Includes for test	

6 Namespace Index

File Index

Here is a list of all files with brief descriptions:			
src/main.cpp	11		

8 File Index

Namespace Documentation

5.1 WIP Namespace Reference

Includes for test.

Functions

• void exampleEasyLogging ()

Example of how to use easylogging with a configuration file.

5.1.1 Detailed Description

Includes for test.

Namespace for work in progress.

Namespace I used for testing and trying out new things To be deleted

5.1.2 Function Documentation

5.1.2.1 exampleEasyLogging()

```
void WIP::exampleEasyLogging ( )
```

Example of how to use easylogging with a configuration file.

- · This function is an example of how to use easylogging
- · The configuration file is located in ../conf
- · Before proper integration, config has to be done properly

Todo

Definition at line 54 of file main.cpp.

File Documentation

6.1 README.md File Reference

6.2 src/main.cpp File Reference

```
#include "easylogging++.h"
#include <iostream>
#include "json/json.h"
#include "catch2/catch_all.hpp"
```

Namespaces

namespace WIP
 Includes for test.

Functions

void WIP::exampleEasyLogging ()

Example of how to use easylogging with a configuration file.

int main (int argc, char *argv[])
 Main function.

6.2.1 Function Documentation

6.2.1.1 main()

```
int main (
                int argc,
                 char * argv[] )
```

Main function.

Codeconvention:

Formatter: astyle

Todo

Definition at line 26 of file main.cpp.

References WIP::exampleEasyLogging().
